

# MILTECH™ 9116 TSN

## 8 x 1000Base-T + 4 x1000/10GBase-T + 4 x1/10G F/O L2/L3 Ethernet Switch with Full TSN, Input/Output clocks

MILTECH 9116 TSN is a member of the super-speed TSN Ethernet switches, aimed at providing advanced timing solutions for military applications on top of a standard Ethernet switch (such as MILTECH 9116).

Providing 8 x 10/100/1000Base-T ports, 4 x 100/1000/10GBase-T, 4 x 1/10G F/O, 1PPS, and 10MHz (In and Out), this switch is designed to support networking and precise timing applications such as manned/autonomous vehicles, Avionics, UAVs, and mobile equipment in battlefield environments supporting super-speed networking and time precision.

MILTECH 9116TSN supports advanced Time-Sensitive Networking (TSN) features, including Time-Aware Shaper (TAS), Frame Preemption, and Per-Stream Filtering and Policing (PSFP). These capabilities ensure deterministic data delivery and low-latency communication, which is essential for real-time military applications.

Along with most common routing protocols such as RIP, OSPF and IPv6 Static routing, the switch's hardware-based timestamping and synchronization mechanisms, compliant with IEEE 802.1AS and IEEE 802.1Qbv standards, enable precise time coordination across networked devices. The MILTECH 9116TSN's support for multiple timing domains and seamless integration with existing network infrastructure make it a versatile solution for complex, mission-critical environments.

Equipped with MIL circular connectors that meet the NGVA standards and a durable enclosure, the MILTECH 9116TSN is designed to withstand harsh conditions with ease.

MILTECH 9116TSN is designed to meet the IP67, MIL-STD-810: thermal, shock, vibration, altitude, humidity, along with MIL-STD-461 EMI/EMC

Wide range of DC input (18-48VDC) and MIL-STD-1275/704 power supply allows easy integration in existing and new solutions

The durable design, flat mounting surface, and RoHS / REACH compliance make the MILTECH 9116TSN suitable for almost any application
