M8186 SERIES DC/DC POWER SUPPLY

Functions and Signals

INHIBIT

The **INHIBIT** signal is used to turn the power supply ON and OFF. OPEN – will turn on the power supply.
SHORT – between pin 14 and pin 1 will turn off the power supply. This signal is referenced to the **SIGNAL RTN** pin.

SENSE

The **SENSE** is used to achieve accurate load regulations at load terminals (this is done by connecting the pins directly to the load's terminals).
The use of remote sense has a limit of voltage dropout between converter's output and load terminals of 2-10% of voltage output (up to 2V).
Please note that if Sense lines are not used the output may rise as much as 2V above nominal outputs. If sense lines are not to be used in the application, please inform factory for internal connection to output pins.
